How to Register a Computer on the DBU Wireless Network (Windows)

The process below was completed with a computer utilizing the Windows 10 operating system. Though images may vary, the procedure can be completed using previous versions of Windows.

Connecting to a DBU Access Point:

1. Click the wireless connection icon located at the bottom right of the task bar. A menu will appear, similar to the one pictured below.

2. Click on the “DBU” wireless network connection (not “DBU-Guest”).
3. Make sure that “Connect Automatically” is selected, then click “Connect”.

4. After clicking “Connect”, a prompt will display requesting a username and password.

5. In the space labeled “Username,” enter the WebAdvisor username for the owner of the device (the same username that is used for Blackboard and DBU Email logins).

6. In the space labeled “Password,” enter the WebAdvisor password for the owner of the device.
7. If prompted to verify a security certificate, click “Connect”.

8. After submitting the correct information, a confirmation message will appear.

The DBU Wireless Network should now be accessible on the device.
